

AI-Powered AQI Prediction

A comprehensive MLOps pipeline for estimating Air Quality Index across multiple geographical nodes.

Overview

This project integrates trained scikit-learn models with a FastAPI backend for real-time inference. Features automated data cleaning scripts and a responsive monitoring dashboard for visual telemetry.

Features

- **Machine Learning:** Scikit-Learn based predictive modeling
- **Backend:** FastAPI for high-performance API endpoints
- **Data Engineering:** Pandas and automated data cleaning scripts
- **Frontend:** Next.js data visualization dashboard
